

## **Dust Models**

**Nathalie YSARD**

**(Institut d'Astrophysique Spatiale, Orsay, France)**

Wednesday, July 26, 2023, 11:00-13:00

In this lecture, after a brief overview of the observations used to calibrate the interstellar dust models for our galaxy, we will review the different elements used to define these models. Two public models, one empirical and one based on laboratory measurements, will be described in detail. We will conclude with a few points to bear in mind when analysing data based on dust models.
